juanpabloaj commented on Aug 2, 2011

when I try autocomplete a name of file for vim, example I try open .vimrc I get

```
$ vim ~/.vim<TAB>
_arguments:448: _vim_files: function definition file not found
_arguments:448: _vim_files: function definition file not found
_arguments:448: _vim_files: function definition file not found
$ vim ~/.vim
```

a similar problem with

```
git checkout mas<TAB>.....
_git:47: __git_aliases_and_commands: function definition file not found
_git:47: __git_aliases_and_commands: function definition file not found
```

janpabloaj: I'm new to zsh and to zcompdump, however this problem seems to resolve by removing (or moving away) your ~/.zcompdump file.

The issue appears not to be directly related to oh-my-zsh.

juanpabloaj commented on Sep 7, 2011

ok, thanks @kellerds

I disabled the autojump plugin from my oh-my-zsh plugin list and it works fine now. I think there is a problem with the autojump plugin for oh-my-zsh.

kcorcoran commented on Jan 24, 2013

I ran into this problem after adding `setopt HIST_IGNORE_ALL_DUPS` to `~/.zshrc` .
removing `~/.zcompdump` and restarting all shells fixed it.

paulcalabro commented on Mar 11, 2013

Removing `~/.zcompdump` and restarting all shells fixed it for me as well!

holys commented on May 13, 2013

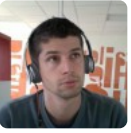

Just run `exec zsh` to solve this.

Removing `~/.zcompdump` and restarting all shells fixed it for me as well!
Same. Thanks.

niftylettuce commented on Aug 28, 2013

thanks for this

Flaeme commented on Aug 29, 2013

Well, nice to know I could have found this out easily earlier. I was messing around with zsh modules and eventually created a new user to do it, but when I restarted, I ran into this in all my normal shells. I spent forever trying to figure out how making a new user could have caused this, then I found this, removed my `.zcompdump`, and new shells work fine.

thx it works

vvo commented on Nov 17, 2013

Just run `exec zsh` to solve this.
This worked fine for me

miguelbaldi commented on Nov 18, 2013

Just run `exec zsh` to solve this.

Worked like a charm!

drewlustro commented on Feb 15, 2014

Just run `exec zsh` to solve this.

whew, thank you **@holys** !!

Kakadu commented on Jul 9, 2014

If somebody will be affected by this problem: on my machine I needed to remove file `~/ .zcompdump-hostname-5.0.5` instead of `~/ .zcompdump`

rafmagana commented on Apr 20, 2015

Just run `exec zsh` to solve this.

This worked for me, thanks, **@holys**.

stephanebachelier commented on Aug 14, 2015

Thanks !

tao12345666333 commented on Aug 21, 2015

Well, thanks! **@Kakadu** I solved in the same way.

egoens commented on Aug 24, 2015

Thanks for the suggestion **@Kakadu**. This worked for me as well.

victoryancn commented on Sep 1, 2015

Thanks !**@Kakadu**, it works!

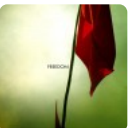

Neraste commented on Oct 14, 2015

@BigDSK: this solved my problem!

sishuiliunian commented on Dec 5, 2015

it works!

ergouge commented on Dec 8, 2015

Well, thanks a lot! @Kakadu

cswanghan commented on Dec 16, 2015

```
rm ~/.zcondump*
exec zsh
```

works for me.

hatakawas commented on Dec 16, 2015

```
rm ~/.zcondump*
exec zsh
```

Yes!

meowoodie commented on Jan 3

thx @kcorcoran , your suggestion is helpful!

runforprogram commented on Jan 8

```
rm .zconfump*
```

 ,after

```
exec zsh
```

 ,the

```
.zcondump*
```

 file recreate , but fixed! thanks

timercrack commented on Jan 26

```
rm ~/.zcondump*
```

 works for me, thanks!

xanview commented 21 days ago

```
rm ~/.zcondump*
```

 worked for me too, thanks!
